

Motor Capacitors

kVArCorrect stock a wide range of top quality capacitors in New Zealand

Why kVArCorrect?

- Power factor & capacitor specialists
- Highest quality components
- We carry both economy and premium ranges of capacitors
- Excellent value for money
- Local stock holdings
- Superior designs for ease of use, thermal management, longevity, maintenance, and quality
- Exceptional customer service, after sales support, and service resources
- Flexibility in product design and solutions

Technical Information

- Motor Run Capacitors are of Elco brand, made to kVArCorrect specifications in Malaysia
- Economy Motor Start Capacitors are of BMI brand, over-specified at 330Volt instead of the standard 275Volt. These are made in the USA.
- Premium Motor Start Capacitors are of Iskra brand, made to kVArCorrect specifications in Europe. These are up to 100 μ F and are physically larger than the normal Motor Start Capacitors. These are best for motors that have many starts per hour of operation, as they have a significantly increased expected lifetime under those conditions

Electrical Components Sdn Bhd began as a power research facility in 1978, and has developed into Malaysia's leading capacitor and power factor manufacturer. Using European machinery, technology, and processes, Elco continues to offer innovative solutions across the globe. An ISO9001 company, Elco aims to be the first choice in energy efficiency by focusing on cost, quality, & service. It is a fact that the life of capacitors is proportional to the quality of the polypropylene films, and the best films consistently outperform all others, including low cost Italian products.
